Abstrak

Wanita Penjaja Seks merupakan kelompok risiko tinggi terkena IMS dan paling berpengaruh dalam persebaran IMS. Perilaku penggunaan kondom adalah salah satu upaya untuk mencegah dan menanggulangi penularan IMS. Desain penelitian ini adalah korelasi dengan pendekatan *cross sectional*, yang bertujuan untuk mengetahui hubungan perilaku seksual wanita penjaja seks dengan kejadian infeksi menular seksual di wilayah kerja Puskesmas Puger Kabupaten Jember Tahun 2018. Populasi dalam penelitian ini adalah penjaja seks komersial dengan jumlah 80 orang dengan sampel 66 responden yang diambil secara *simple random sampling*. Pengumpulan data menggunakan kuesioner. Hasil penelitian menunjukkan perilaku seks WPS dapat disimpulkan bahwa sebanyak 36 responden (54,5%) berperilaku aman. perilaku WPS yang aman terkena IMS sebanyak 15 responden (22,7%), sedangkan perilaku WPS yang tidak aman terkena IMS sebanyak 14 responden (21,2%). Hasil uji statistik *chi-square* menunjukkan adanya hubungan perilaku seksual wanita penjaja seks dengan kejadian infeksi menular seksual di wilayah kerja Puskesmas Puger Kabupaten Jember ($p\text{-value} = 0,025$; $\alpha = 0,05$) pemberian informasi, pembinaan, pendidikan dan sarana kesehatan yang baik, dapat mempengaruhi perilaku wanita penjaja seks dan pelanggannya. Kata Kunci : perilaku seksual, wanita penjaja seks, infeksi menular seksual.

Abstract

Female Sex Workers are a high-risk group affected by STIs and most influential in the spread of STIs. Condom use behavior is one of the efforts to prevent and cope with STI transmission. The research design used is correlation with cross sectional approach, which aims to know the relationship of sexual behavior of female sex workers with the incidence of sexually transmitted infections in the work area Puskesmas Puger Jember District Year 2018. Population in this study is a commercial sex worker with the number of 80 people and samples 66 respondents taken by simple random sampling. Data collection uses questionnaires about behavior. The results showed that sex behavior WPS can be concluded that as many as 36 respondents (54.5%) behaved safely. the behavior of safe sex workers affected by STIs as many as 15 respondents (22.7%), while the behavior of unsafe sex workers affected by STI as many as 14 respondents (21.2%). The result of chi-square statistic test is 0,025 which means $p\text{-value} > \alpha = 0,05$, hence it can be concluded that H1 is accepted which means there is relationship of sexual behavior of female sex worker with the incidence of sexually transmitted infection in work area Puskesmas Puger Regency Jember. Providing information, coaching, education and health facilities, can affect the behavior of female sex workers and their customers.

Keywords: sexual behavior, female Sex Worker, sexually transmitted infection.
