Hubungan Dukungan Keluarga Dengan Kepatuhan Kontrol Pada Pasien Post Operasi Katarak di Desa Sukosari Kecamatan Sukowono Jember

Vi + 46 halaman + 1 bagan + 6 tabel + 14 lampiran

Abstrak

Di Indonesia, perkiraan insiden katarak adalah 0,1% per tahun, dan 7,89% dari penduduk jawa timur merupakan penderita katarak. Salah satu penatalaksanaan katarak dilakukan dengan tindakan operasi dan harus melakukan control ulang setelah operasi. Faktor-faktor yang mempengaruhi kepatuhan kontrol salah satunya adalah dukungan keluarga.. Populasi penelitian ini adalah pasien post operasi katarak di Desa Sukosari Kecamatan Sukowono Jember sebanyak 28 responden dengan sampel 28 responden diambil secara *total sampling*. Hasil penelitian dukungan keluarga didapatkan hasil sebanyak 23 pasien (82,1%) memiliki dukungan keluarga dalam kategori baik dan dukungan keluarga kategori sedang sebanyak 5 pasien (17,9%), dan dukungan keluarga kategori kurang 0. Kepatuhan kontrol pasien post operasi menunjukkan bahwa sebanyak 15 pasien (53,6%) memiliki kategori patuh, sebanyak 10 pasien (35,7%) memiliki kategori sedang dan sebanyak 3 pasien (10,7%) tidak patuh melaksanakan kontrol. Hasil uji statistik *Chi Square* dengan ($\alpha = 0,05$) didapatkan *p value* 0,000, yang artinya ada hubungan antara dukungan keluarga dengan kepatuhan kontrol pasien post operasi katarak. Dapat disimpulkan bahwa penelitian ini memiliki hubungan dukungan keluarga dengan kepatuhan kontrol pasien post operasi katarak di Desa Sukosari Kecamatan Sukowono Jember. Artinya, pasien post operasi katarak yang memiliki dukungan keluarga baik memiliki peluang yang lebih tinggi untuk patuh melakukan kontrol post operasi katarak.

Kata kunci : Dukungan Keluarga, Kepatuhan Kontrol, Kontrol Post Operasi.

Relationship between Family Support and Control Compliance in Post Cataract Surgery Patients in Sukosari Village, Sukowono District, Jember

Vi + 46 pages + 1 chart + 6 tables + 14 attachments

Abstract

In Indonesia, the estimated incidence of cataracts is 0.1% every year, and 7.89% of the population of East Java are cataract sufferers. One of the management of cataracts is surgery and must be re-controlled after surgery. One of the factors that influence control compliance is family support. The population of this study were post cataract surgery patients in Sukosari Village, Sukowono District, Jember as many as 28 respondents with a sample of 28 respondents taken by total sampling. Family support research results obtained were 23 patients (82.1%) had family support in the good category and family support was in the moderate category as many as 5 patients (17.9%), and family support was in the poor category 0. Postoperative patient control compliance showed that as many as 15 patients (53.6%) had the compliance control category, 10 patients (35.7%) had the moderate category and 3 patients (10.7%) did not comply with the control. The results of the Chi Square statistical test with ($\alpha = 0.05$) obtained a p value of 0.000, which means that there is a relationship between family support and post-cataract surgery patient control compliance. It can be concluded that this study has a relationship between family support and control compliance of post cataract surgery patients in Sukosari Village, Sukowono District, Jember. It means, post cataract surgery patients who have good family support have a higher chance to adhere to post cataract surgery control.

Keywords : Family Support, Compliance Control, Post Operation Control.
