Hubungan Kecemasan Masyarakat Dengan Kepatuhan Melaksanakan Protokol Covid-19 Di Wilayah Kerja Puskesmas Semboro Kabupaten Jember, 2021

xvii + 78 hal + 18 tabel + 1 Gambar + 7 lampiran

Abstrak

Coronavirus Disease merupakan penyakit yang sangat mudah menular sehingga diperlukan upaya pencegahan penularan. Berbagai macam protokol telah diberlakukan namun, penambahan kasus covid-19 terjadi setiap harinya dengan angka penularan yang masih cukup tinggi. Tingginya angka penular merupakan dampak ketidakpatuhan masyarakat terhadap protokol kesehatan. Penelitian ini bertujuan mengetahui hubungan kecemasan masyarakat dengan perilaku kepatuhan melaksanakan protokol covid-19. Metode penelitian menggunakan metode korelasional dengan pendekatan *cross sectional*. Besar sample pada penelitian adalah sebanyak 93 responden dengan Teknik sampling menggunakan *purposive sampling*. Analisis data menggunakan uji *spearman rho*. Hasil penelitian menunjukkan bahwa sebagian besar masyarakat berada pada tingkat kecemasan sedang (47,3%) dan sebagian besar telah patuh dalam melaksanakan protokol kesehatan (75,3%). Hasil uji statistik menunjukkan bahwa secara signifikan ada hubungan kecemasan masyarakat dengan kepatuhan melaksanakan protokol Covid-19 (p value = 0,000; α = 0,05; r = 0,607). Hasil penelitian tersebut menunjukkan bahwa kecemasan dengan kepatuhan masyarakat dalam melaksanakan protokol kesehatan merupakan alasan kausalitas dalam perilaku pencegahan sehingga perlu memberikan motivasi dan melakukan komunikasi secara persuasive dan humanis kepada masyarakat

The Relationship between Public Anxiety and Compliance with Implementing the Covid-19 Protocol in the Work Area of the Semboro Health Center, Jember Regency, 2021

viii + 86 pages + 18 tables + 1 picture + 5 attachments

Abstract

Coronavirus disease is a highly contagious disease, so it is necessary to prevent transmission. Various protocols have been implemented, however, the addition of Covid-19 cases occurs every day with the distribution rate is still quite high. The high number of infectious agents is the impact of the community's non-compliance with health protocols. This study aims to determine the relationship between the community and adherence to the Covid-19 protocol. The research method uses a correlational method with a cross sectional approach. The sample size in the study was 93 respondents with a sampling technique using purposive sampling. Data analysis using Spearman Rho test. The results showed that most of the people were at a moderate level of anxiety (47.3%) and most of them had complied with the health protocols (75.3%). The test results showed that there was a significant relationship between public anxiety and adherence to the Covid-19 protocol (p value = 0.000; α = 0.05; r = 0.607). The results of this study indicate that anxiety with community compliance in implementing health protocols is a causal reason in preventing behavior so it is necessary to provide motivation and communicate persuasively and humanely to the community.

Key Words : Anxiety, Society, Compliance, Covid-19 Protocol
