Hubungan Peran Perawat dengan Perilaku Pencegahan Covid-19 pada Penderita Tuberkulosis Paru di Rumah Sakit Paru Jember

xviii + 68 hal + 21 tabel + 1 Gambar + 5 lampiran

Abstrak

Perawat mempunyai peran yang sangat penting dalam peningkatan perilaku pencegahan covid – 19 pada pasien tuberkulosis. Peran tersebut terdiri dari peran sebagai fasilitator, peran sebagai motivator, peran sebagai konselor dan peran sebagai edukator. Tindakan pencegahan ini termasuk mencuci tangan, membatasi kontak orang ke orang dan mempraktikkan jarak sosial, mengenakan masker wajah, serta vaksinasi. Penelitian ini bertujuan untuk mengetahui hubungan peran Perawat dengan perilaku pencegahan covid-19 pada penderita tuberkulosis paru di Rumah Sakit Paru Jember. Penelitian ini merupakan korelasional dengan pendekatan *cross sectional*. Populasi penelitian ini sebanyak 119 pasien. Sampel pada penelitian adalah pasien tuberkulosis di Rawat Jalan Rumah Sakit Paru Jember sebanyak 92 pasien dengan teknik quota sampling. Instrumen yang digunakan adalah kuesioner peran Perawat dan Pedoman Pencegahan dan pengendalian *Coronavirus Disease*. Analisis data yang digunakan dalam penelitian ini adalah uji *spearman rho*. Hasil penelitian menunjukkan bahwa sebagian besar (70,7%) responden menyatakan bahwa peran Perawat di Rumah Sakit Paru Jember dalam kategori baik serta perilaku pencegahan covid-19 pada penderita Tuberkulosis Paru sebagian besar berada pada perilaku pencegahan yang baik (63%). Terdapat hubungan antara peran Perawat dengan perilaku pencegahan covid-19 pada penderita tuberkulosis paru di Rumah Sakit Paru Jember (*p value*: 0,000; $\alpha < 0,05$; *r*: 0,716). Direkomendasikan agar disediakan asesmen kebutuhan edukasi dan konseling kesehatan. Serta menyediakan program konseling secara adekuat seperti pedoman konseling bagi Perawat untuk memberikan konseling kesehatan bagi penderita tuberkulosis

Kata kunci : Peran Perawat, Perilaku Pencegahan Covid-19, Tuberkulosis Paru

The Relationship of the Role of Health Workers with Covid-19 Prevention Behavior in Pulmonary Tuberculosis Patients at Jember Chest Hospital

xviii + 68 pages + 21 tables + 1 picture + 5 attachments

Abstract

Nurses have a very important role in improving COVID-19 prevention behavior in tuberculosis patients. The role consists of a role as a facilitator, a role as a motivator, a role as a counselor and a role as an educator. These precautions include washing hands, limiting person-to-person contact and practicing social distancing, wearing face masks, and vaccinations. This study aims to determine the relationship between the role of nurses and COVID-19 prevention behavior in patients with pulmonary tuberculosis at the Jember Lung Hospital. This research is correlational with cross sectional approach. The population of this study was 119 patients. The sample in this study was tuberculosis patients in Outpatient Jember Lung Hospital as many as 92 patients with quota sampling technique. The instruments used are the Nurse's Role Questionnaire and the Guidelines for the Prevention and Control of Coronavirus Disease. Analysis of the data used in this study is the spearman rho test. The results showed that the majority (70.7%) of respondents stated that the role of nurses at the Jember Lung Hospital was in the good category and the prevention behavior of covid-19 in patients with pulmonary tuberculosis was mostly in good prevention behavior (63%). There is a relationship between the role of nurses and COVID-19 prevention behavior in pulmonary tuberculosis patients at the Jember Lung Hospital (p value: 0.000; <0.05; r: 0.716). It is recommended that education needs assessment and health counseling be provided. As well as providing adequate counseling programs such as counseling guidelines for nurses to provide health counseling for tuberculosis sufferers

Key Words : *The Role of Health Workers, Covid-19 Prevention Behavior, Pulmonary Tuberculosis*
