Hubungan Dukungan Keluarga Dengan Kualitas Hidup Pada Pasien Gagal Jantung Kongestif Di Wilayah Kerja Puskesmas Rogotrunan Kabupaten Lumajang.

xvii + 94 hal + 1 Bagan + 10 tabel + 18 lampiran

Abstrak

Gagal jantung kongestif ialah pemicu utama salah satu mortalitas yang ada di dunia. Gagal jantung juga ialah faktor utama *problem* kesehatan masyarakat dinegara-negara maju maupun negara berkembang contohnya Indonesia. Penyakit gagal jantung kongestif ialah penyakit kronis yang membebani penderita dan juga keluarga, serta pasien yang dalam perawatan di rumah sakit dengan kondisi keadaan yang kompleks. Tujuan penelitian ini adalah Menganalisis hubungan dukungan keluarga dengan kualitas hidup pada pasien gagal jantung kongestif di Wilayah Kerja Puskesmas Rogotrunan Kabupaten Lumajang. Metode penelitian ini menggunakan kolerasional dengan pendekatan *cross sectional*. Populasi dalam penelitian ini 130. Sampel yang diambil 39 responden. Teknik sampling yang di gunakan adalah *non probability sampling*.. Analisis yang digunakan Uji *Spearman Rho*. Pengumpulan data menggunakan Kuesioner skala likert dan Kuisioner WHOQOL-BREF. Hasil analisa data menunjukkan bahwa pasien yang mengalami dukungan keluarga baik 36 responden (92,3%). Dukungan keluarga sedang 3 responden (7,7%) sedangkan pasien yang mengalami kualitas hidup baik 32 responden (82,1%), kualitas hidup biasa saja 7 responden (17,9%). Hasil uji statistik menggunakan *Spearman Rho* dengan $\alpha = 0,05$ diperoleh nilai $p \text{ value} = 0,000$ sehingga dapat disimpulkan bahwa ada hubungan antara dukungan keluarga dengan kualitas hidup pada pasien gagal jantung kongestif di Wilayah Kerja Puskesmas Rogotrunan Kabupaten Lumajang. Maka dapat disimpulkan bahwa H1 diterima yang berarti ada hubungan antara dukungan keluarga dengan kualitas hidup pada pasien gagal jantung kongestif di Wilayah Kerja Puskesmas Rogotrunan Kabupaten Lumajang.

Kata Kunci: Dukungan Keluarga, Kualitas Hidup, Gagal Jantung Kongestif.

Relationship between family support and quality of life in patients with congestive heart failure in the working area of the Rogotrunan Health Center, Lumajang Regency.

xvii + 94 pages + 1 Chart + 10 tables + 18 attachments

Abstract

Congestive heart failure is a major cause of mortality in the world. Heart failure is also a major factor in public health problems in developed and developing countries such as Indonesia. Congestive heart failure is a chronic disease that burdens sufferers and their families, as well as patients who are hospitalized with complex conditions. The purpose of this study was to analyze the relationship between family support and quality of life in patients with congestive heart failure in the Rogotrunan Public Health Center, Lumajang Regency. Design This study uses a correlational with a cross sectional approach. The population in this study was 130. The sample taken was 39 respondents. The sampling technique used is non-probability sampling. The analysis used is the Spearman Rho test. Collecting data using Likert scale questionnaire and WHOQOL-BREF questionnaire. The results of data analysis showed that patients who experienced good family support were 36 respondents (92.3%). Moderate family support is 3 respondents (7.7%) while patients who experience good quality of life are 32 respondents (82.1%), quality of life is average 7 respondents (17.9%). The results of statistical tests using Spearman Rho with = 0.05 obtained p value = 0.000 so it can be concluded that there is a relationship between family support and quality of life in patients with congestive heart failure in the Work Area of the Rogotrunan Health Center, Lumajang Regency. It can be concluded that H1 is accepted, which means that there is a relationship between family support and quality of life in patients with congestive heart failure in the Rogotrunan Public Health Center, Lumajang Regency.
