Hubungan *Disaster Education* dengan Kesiapsiagaan Masyarakat Pesisir Dalam Menghadapi Bencana Tsunami di Desa Puger Kulon Kabupaten Jember, 2022.

xvii + 101 hal + 2 bagan + 12 tabel + 11 gambar + 21 lampiran

Abstrak

Upaya pengurangan risiko bencana tsunami melalui *disaster education* terhadap masyarakat khususnya di kawasan pesisir pantai rutin dilaksanakan, namun masih banyak masyarakat yang kurang tepat dalam mempersepsikan bencana tsunami. Hal ini menyebabkan pengetahuan, keterampilan serta kesadaran akan ancaman bahaya tsunami pada masyarakat pesisir masih menjadi masalah yang harus diselesaikan. Tujuan penelitian ini adalah untuk mengetahui hubungan *disaster education* dengan kesiapsiagaan masyarakat pesisir menghadapi bencana tsunami. Desain penelitian ini adalah studi korelasional dengan pendekatan *cross sectional*. Populasi dalam penelitian ini sebanyak 141 masyarakat pesisir di Desa Puger Kulon Kabupaten Jember dengan sampel penelitian yang diperoleh sebanyak 104 orang dengan teknik *simple random sampling*. Analisis data menggunakan uji *Chi-Square*. Hasil penelitian menunjukkan *disaster education* masyarakat pesisir dalam kategori baik sebesar 64,4% dan kesiapsiagaan masyarakat pesisir dalam menghadapi bencana tsunami dalam kategori siap dengan presentase 31,7%. Ada hubungan yang signifikan *disaster education* dengan kesiapsiagaan masyarakat pesisir dalam menghadapi bencana tsunami dengan p value 0,0001. Petugas kesehatan diharapkan dapat terlibat secara maksimal sebagai edukator, fasilitator dan *care provider* dalam upaya mitigasi bencana guna mengurangi risiko terjadinya bencana tsunami yang menjadi potensi bencana tinggi. Rekomendasi pada penelitian ini adalah agar peneliti selanjutnya menambahkan variabel perilaku sebagai variabel dalam penelitian.

Kata Kunci: Edukasi kebencanaan, kesiapsiagaan masyarakat, keperawatan komunitas

Abstract

Efforts to reduce tsunami disaster risk through disaster education towwards the community especially in coastal areas, is routinely carried out, but there are still many peaople who do not correctly perceive the tsunami disaster.. This means that coastal people' knowledge, abilities, and awareness of the threat of a tsunami is still a concern that has to be addressed. The purpose of this study is to see if there is a link between disaster education and coastal community readiness for a tsunami disaster. The research design was carried out as a correlational study using a cross-sectional approach. The population in this study were 141 coastaal communities in Puger Kulon Village, Jember Regency. The research sample obtained was 104 respondents using a simple random sampling technique. Data analysis was performed by univariate and bivariate analysis using the Chi-Square test. The results showed disaster education coastal communitiesin good category 64,4% and the preparadness of coastal communities in dealing with the tsunami disasters in the AAP category with a percentage of 31,7%.There was a significant relationship between disaster education and the preparadness of coastal communities in the face of tsunami with a p value of 0,0001. Health workers are expected to be maximally involved as educators, facilitators and care providers in disaster mitigation efforts in order to reduce the risk of a tsunami disaster which has a high potential for disaster. The recommendation in this study is for further researchers to add behavioral variables as variables in this study.

Keywords: disaster education, community preparadness, community nursing
