Hubungan *Family Support* Dengan Kepatuhan Perawatan Gigi Pada Siswa Kelas 4 Di SDN Tisnonegaran 3 Kota Probolinggo

xvi + 97 hal + 8 tabel + 11 lampiran

Abstrak

Masalah kesehatan gigi merupakan suatu hal yang perlu diperhatikan oleh keluarga terutama pada anak karena hal tersebut dapat mengganggu asupan gizi, aktivitas dan kenyamanan anak sehingga perlu dilakukan perawatan gigi secara rutin untuk menjaga kesehatan gigi anak. *Family support* perlu diberikan pada anak sebagai motivasi untuk meningkatkan kesadaran anak mengenai pentingnya patuh dalam melakukan perawatan gigi. Tujuan penelitian ini untuk mengetahui hubungan *family support* dengan kepatuhan perawatan gigi pada siswa. Jenis penelitian ini adalah penelitian kuantitatif dengan desain *cross sectional*. Populasi dalam penelitian ini sebanyak 70 siswa kelas 4 dengan sampel penelitian yang diperoleh 60 responden melalui teknik *simple random sampling*. Uji statistik menggunakan *Spearman Rho*. Hasil penelitian menunjukkan bahwa sebagian besar (68,3%) responden memiliki *family support* baik serta patuh dalam perawatan gigi dan sebagian besar (48,3%) responden kurang patuh dalam melakukan perawatan gigi. Hasil uji statistik didapatkan p value $0,0001 < (= 0,05)$ artinya ada hubungan yang signifikan antara *family support* dengan kepatuhan perawatan gigi. Kekuatan korelasi kuat dan arah korelasi positif yang artinya semakin baik *family support* maka semakin patuh perawatan gigi. Hasil dari penelitian ini baiknya untuk diberikan perlakuan sehingga dapat menggambarkan kondisi kepatuhan perawatan gigi pada siswa dan lebih mengkhususkan pada dukungan emosional dan penghargaan pada *family support*.

Kata Kunci: *Family Support*, Kepatuhan Perawatan Gigi, Anak Usia Sekolah

Relationship Between Family Support And Dental Care Compliance on 4th Grade Students In SDN Tisnonegaran 3 Probolinggo City

xvi + 97 pages + 8 tables + 11 attachment

Abstract

The problem of dental health is something that needs to be considered by families, especially children, because it can interfere with the nutritional intake, activities, and comfort of children, so it is necessary to carry out regular dental care to maintain the health of children's teeth. Children's family support needs to be given to children as a motivation to increase children's awareness about the importance of being obedient in performing dental care. This study aims to determine the relationship between family support and dental care adherence in students. This type of research is quantitative research with cross-sectional design. The population in this study was 70 4th grade students, with a research sample obtained by 60 respondents through a simple random sampling technique. Statistical test using Spearman Rho. The results showed that most (68.3%) of respondents had good family support and were obedient in dental care, and most (48.3%) of respondents were less compliant in dental care. Statistical test results obtained a p value of $0.0001 < (\alpha = 0,05)$ meaning that there is a significant relationship between family support and dental care compliance. The strength of the correlation is strong and the direction of the correlation is positive, which means that the better the family support, the more obedient to dental care. The results of this study are good for treatment so that it can describe the condition of dental care compliance in students and is more focused on emotional support and appreciation for family support.

Keywords: Family support, Dental Care Compliance, School Age Children
