This thesis is the result of field research on "Review of Islamic Law on Buying and Selling Using the Real Money Trading System in the Player Unknown Battle Ground Mobile (PUBGM) game. This research aims to answer the problem of how to practice buying and selling with the Real Money Trading system in Player Unknown Battle Game Ground Mobile (PUBGM) ? and what is the review of Islamic law regarding buying and selling with the Real Money Trading system in Game Player Unknown Battle Ground Mobile (PUBGM)?

Research data collected through literature review methods and interviews with Game Player Unknown Battle Ground Mobile (PUBGM) players were then analyzed using descriptive analytical methods.

The results of the study show that: first, there are three ways of buying and selling using the Real Money Trading system, namely buying and selling between buyers and developers through game applications; buying and selling between buyers and developers through the official website; and buying and selling between players and other players through social media. secondly, the practice of buying and selling with the Real Money Trading system in Game Player Unknown Battle Ground Mobile (PUBGM) has fulfilled the pillars of buying and selling in Islamic law but the conditions for buying and selling have not been fulfilled because it contains elements of *gharar* in it which is caused by unclear ownership of the object of sale and purchase and also the time period until Game Player Unknown Battle Ground Mobile (PUBGM) was closed and there were many children who had not reached puberty in making Real Money Trading transactions, and also many frauds in every transaction between players and other players.

In line with the conclusions above, there are several suggestions, namely: First, for all Unknown Battle Ground Mobile (PUBGM) Game Players to get the desired items themselves so they don't make buying and selling transactions with the Real Money Trading system; secondly, players who will make buying and selling transactions using the Real Money Trading system are expected to avoid these transactions because they can harm themselves in the future and there must be supervision from parents for children who are not yet mature when they want to make Real Money Trading transactions.
