**Hubungan Pengetahuan Triage Dengan Tingkat Kecepatan Penanganan Pasien Di IGD RS Baladhika Husada Jember**

Xv+53 halaman+1 bagan+3 tabel+15 lampiran

### **Abstrak**

**Pendahuluan:** Instalasi Gawat Darurat (IGD) merupakan salah satu komponen penting dalam rumah sakit. IGD peruntukkan untuk pelayanan kesehatan yang bersifat darurat (Health Direct, 2021). Solusi untuk mengatasi kepadatan IGD adalah salah satunya dengan sistem triase. **Tujuan:** Mengetahui hubungan pengetahuan triage dengan tingkat kecepatan penanganan pasien di IGD RS Baladhika Husada Jember. **Metode:** Desain penelitian correlation study yang bertujuan mencari hubungan dua variable, pendekatan yang digunakan dalam penelitian ini adalah cross sectional dimana variabel di ukur dalam satu waktu. **Hasil Penelitian:** Berdasarkan hasil penelitian diketahui bahwa pengetahuan tentang triage responden adalah mayoritas baik 21 orang dengan persentase 77,5 %.mayoritas kecepatan penanganan pasien adalah cepat 24 orang dengan persentase 85,5%. Didapatkan pula hasil bahwa H1 diterima yakni terdapat korelasi atau hubungan antara pengetahuan triage dengan tingkat kecepatan penanganan pasien di IGD RS Baladhika Husada Jember yang dibuktikan dengan nilai pearson correlation yakni sebesar  $0,03 < 0,05$ . Uji statistic dengan correlation pearson dengan P Value 0,03, sedangkan koefisien korelasi yakni sebesar 0,587. **Kesimpulan** penelitian ini ada hubungan pengetahuan triage dengan tingkat kecepatan penanganan pasien di IGD RS Baladhika Husada Jember. **Saran:** Diharapkan apabila peneliti lain hendak melanjutkan penelitian ini dengan mencari inovasi baru terkait penelitian pengetahuan triage pada tenaga Kesehatan di rumah sakit. **Kata kunci:** Gawat Darurat, Kecepatan Penanganan Pasien, Pengetahuan Triage

*The Relationship between Triage Knowledge and the Speed of Patient Handling in the Emergency Room of BALADHIKA HUSADA Jember Hospital*

Xv+53 pages+1 chart+3 tables+15 attachments

**Abstract**

*Introduction: The Emergency Department (ED) is one of the most important components of a hospital. Emergency departments are designated for emergency health services (Health Direct, 2021). One of the solutions to overcome the crowded emergency room is the triage system. Objective: Knowing the relationship between triage knowledge and the speed of patient handling in the emergency room of Baladhika Husada Jember Hospital. Methods: Research design correlation study which aims to find the relationship between two variables, the approach used in this study is cross sectional where variables are measured at one time. Research Results: Based on the results of the study it is known that knowledge of triage respondents is a good majority of 21 people with a percentage of 77.5%. the majority of patient handling speed is fast 24 people with a percentage of 85.5%. It was also found that H1 was accepted, namely there was a correlation or relationship between triage knowledge and the level of patient handling speed in the emergency room of Baladhika Husada Jember Hospital as evidenced by the pearson correlation value of  $0.03 < 0.05$ . Statistical test with Pearson correlation with P Value 0.03, while the correlation coefficient is 0.587. The conclusion of this study is that there is a relationship between triage knowledge and the level of patient handling speed in the emergency room of Baladhika Husada Jember Hospital. Suggestion: It is hoped that if other researchers want to continue this research by looking for new innovations related to triage knowledge research on health workers in hospitals.*
