Pengaruh Pendidikan Kesehatan Triase START Terhadap Penanganan Pra Rumah Sakit Korban Label Kuning Pada Anggota BPBD Kabupaten Bondowoso

xvii + 107 hal + 10 tabel + 1 bagan + 11 lampiran

Abstrak

Pendahuluan: Pra rumah sakit merupakan perawatan medis darurat yang di berikan kepada korban sebelum datang ke rumah sakit, salah satunya pada korban pasca bencana dimana penanggulangan ini bertujuan untuk mencegah kehilangan jiwa dan mengurangi penderitaan pasien. Pendidikan kesehatan Triase START merupakan salah satu upaya dalam peningkatan kemampuan penanganan pra rumah sakit. Metode: Penelitian ini menggunakan jenis metode *pre experiment* dengan pendekatan *pre test post test group desain* yaitu terkait sebelum diberikan edukasi dan pelatihan serta sesudah diberikan edukasi dan pelatihan. Hasil Penelitian: Hasil penelitian menunjukkan bahwa kemampuan penanganan pra rumah sakit korban label kuning sebelum diberikan pendidikan kesehatan triase START yaitu berada dalam kategori cukup dengan persentase 56,0 %, sedangkan kemampuan penanganan pra rumah sakit korban label kuning setelah diberikan pendidikan kesehatan triase START yaitu didalam kategori baik dengan persentase 53,0 %. Didapatkan pula hasil uji *Wilcoxon*, terlihat nilai *significant* yakni sebesar 0,000. Sehingga nilai p adalah $0,000 < 0,05$, maka ditetapkan bahwa bahwa H_1 diterima yakni terdapat pengaruh pendidikan kesehatan triase START terhadap kemampuan pra rumah sakit korban label kuning pada anggota BPBD Kabupaten Bondowoso. Diskusi: Pendidikan kesehatan Triase START diharapkan mampu meningkatkan kemampuan penanganan anggota BPBD dalam memilih korban saat bencana secara tepat dalam penanganan yang merupakan tindakan pra rumah sakit.

The Effect of START Triage Health Education on Handling Pre-Hospital Yellow Label Victims in Members of BPBD Bondowoso Regency

Xvii + 107 pages + 10 tables + 1 drawing + 11 appendices

Abstract

Introduction: Pre-hospital is emergency medical care that is given to victims before coming to the hospital, one of which is post-disaster victims where this response aims to prevent loss of life and reduce patient suffering. Triage START health education is an effort to increase the ability to handle pre-hospital care. Methods: This study used a pre-experimental method with a pre-test post-test group design approach, namely before being given education and training and after being given education and training. Research Results: The results showed that the ability to handle pre-hospital yellow label victims before being given START triage health education, namely the majority were in the sufficient category with a percentage of 56.0%. while the ability to handle pre-hospital yellow label victims after being given START triage health education was the majority in the good category with a percentage of 53.0%. The Wilcoxon test results also showed a significant value of 0.000. So that the p-value is $0.000 < 0.05$, it is determined that H_1 is accepted, namely that there is an influence of START triage health education on the pre-hospital ability of yellow label victims in BPBD Bondowoso Regency members. Discussion: Triage START health education is expected to be able to improve the ability to handle BPBD members in selecting victims during a disaster appropriately in handling which is a pre-hospital action.

Keywords: Health Education, Triage START, Pre Hospital
