The Effect of Local Taxes, Human Development Index, And Investment on Labor Absorption on Economic Growth

Abstract

This study aims to analyze the effect of Local Taxes, Human Development Index, and Investment on Labor Absorption on Economic Growth. Research methods using Statistical analysis using SEM analysis techniques and testing using Smart PLS version 3.0. The analysis results show Local Tax has a positive and significant effect on Labor Absorption. The Community Development Index has a positive and significant effect on Labor Absorption. Investment has a positive and significant effect on labor absorption. Local Tax has a positive and significant effect on Economic Growth. The Community Development Index has a positive and significant effect on Economic Growth. Investment has a positive and significant effect on Economic Growth. Labor absorption has a positive and significant effect on economic growth. [The novelty in the research is the absorption of labor as an intervening variable and the addition of local tax variables. As an evaluation fragment that local taxes, HDI, investment, and employment need specific increases and attention so that in the future investment, HDI, employment, and local taxes can be one of the main pillars of achieving positive economic growth. Researchers only took 3 independent variables, namely Local Taxes, Human Development Index, and Investment. This research period is only from 2017-2021.

Keyword: Local Tax, Human Development Index, Investment, Labor Absorption, Economic Growth.

INTRODUCTION

Today, economic development in developing countries continues to be carried out with the aim of increasing the rate of economic growth, increasing employment opportunities, equalizing income, reducing differences in capabilities between regions, and forming a balanced economic structure. The situation in developing countries in this decade shows that economic development is not able to create employment opportunities that are faster than product increases. Therefore, the problem of unemployment being faced from year to year is getting more and more serious (Suryanto & Wulandari, 2020). Economic growth as a result of a country's national income is the main goal in economic development efforts (Wahyuningrum & Juliprijanto, 2022). It is based on real GDP which can be found in quarterly or yearly time intervals. According to Wardani (2021) the total value of final goods and services produced by all economic units, or the total added value generated by the business units as a whole, is referred to as GDP. Economic growth is also a sign of a country's progress (Rahmawati, 2019).

Keywords: Economic Growth, Human Development Index, Investment, Labor Absorption, Local Tax

ABSTRACT

The study seeks to examine how local taxes, the human development index, and investments in labor absorption affect economic growth. Utilizing Smart PLS 3.0 for testing and statistical analysis, the research approaches include SEM analysis tools. The study's findings demonstrate that a variety of elements, including regional taxes, the Community Development Index, and investments, have a favorable and considerable impact on the region's ability to absorb workers. This demonstrates how raising local tax income, raising the community development index, and
