

ABSTRACT

In the current era of globalization, information technology advanced so quickly. The computer is the equipment created to facilitate the work of man, while noting the progress both in the manufacture of hardware and software. SDN Lengkong 03 requires once an information system support. For this reason the author tried to make a final project on Online Assessment Information system that until now has not been computerized. At this time the existing system in SND Lengkong 03 still done manually, from the recording of value to other data storage associated with the assessment process to preparing reports, making it possible during the process an error in the listing, less accurate reports made and the delay in the search for the required data. Implementation of computer programs used in online assessment information system using the programming language PHP and MySQL data base to facilitate the process of making information systems. Therefore the system tekomputerisasi better than a manual system to run more effectively efficiently.
