

ABSTRACT

SIPOL is an abbreviation for Political Party Information System which is defined as a system and information technology used to facilitate the administrative management of registration, verification and determination of Political Parties participating in the Election for members of the DPR and DPRD as well as continuous updating of data on Political Parties participating in the Election at the KPU level. Provincial KPU, Regency/City KPU, and election participants. SIPOL is considered effective in expediting the KPU's preparations ahead of the elections, namely it can simplify the registration process, verification, and so on. Data checking and correction can always be reviewed by political parties through this application in an effort to fulfill the management and membership requirements of political parties in participating in elections so as to create transparency and accountability at the administrative and factual verification stages. The aim of this research is to obtain an overview of the effectiveness of the political party information system (SIPOL) in verifying political parties at the 2024 election stage at the Bondowoso Regency General Election Commission. This research is included in the type of qualitative descriptive research with data collection techniques in the form of interviews with related parties. The data analysis technique used in this research is data reduction procedures, display (data presentation), and drawing conclusions (verification). The results of this research are that SIPOL has significant effectiveness in verifying political parties at the 2024 election stage at the Bondowoso Regency General Election Commission.

Keywords: Effectiveness, Political Party Information System (SIPOL), Political Party Verification
