Pengkajian Keperawatan Pada Anak Dengan Acute Lymphocytic Leukemia di Ruang Aster RSD dr. Soebandi Jember

xviii + 85 hal + 19 tabel + 5 Gambar + 7 lampiran

### Abstrak

Anak-anak yang menjalani pengobatan *acute lymphocytic leukemia* mengalami beberapa gejala akibat penyakit dan pengobatannya. Identifikasi gejala dan kebutuhan memungkinkan asuhan keperawatan direncanakan dengan baik. Penelitian ini bertujuan untuk Menganalisis pengkajian keperawatan pada anak dengan acute lymphocytic leukemia di Ruang Aster RSD dr. Soebandi Jember. Penelitian ini menggunakan design studi kasus (*case study report*). Partisipan adalah tiga klien anak dengan *acute lymphocytic leukemia* di Ruang Aster RSD dr. Soebandi Jember. Data subjektif berupa hasil pengkajian wawancara, dan data objektif berupa hasil pemeriksaan serta rekam medik. Data dianalisis dengan menggunakan metode deskriptif kualitatif. Hasil menunjukkan riwayat keperawatan berupa (1) anemia, (2) kelemahan, (3) paternal perokok, (4) keluarga dengan penyakit kronis. Pola fungsi kesehatan berupa perubahan pada (1) kardiovaskuler (2) nutrisi, (3) fungsi muskuloskeletal. Hasil pemeriksaan laboratorium berupa (1) hemoglobin rendah, (2) leukopenia, (3) hematokrit menurun, (4) limfosit meningkat, (5) SGPT meningkat, (6) kreatinin meningkat, (7) hipokalemia. Temuan ini memberikan pandangan bahwa profesional perawat dapat menjamin perawatan yang komprehensif dengan mengenali tingkat keparahan manifestasi klinis anak, melakukan anamnesis lengkap, meminta tes laboratorium sehingga dapat merencanakan asuhan dengan baik

*Nursing Assessment of Children with Acute Lymphocytic Leukemia in the Aster Room, RSD dr. Soebandi Jember*

*xviii + 85 pages + 19 tables + 5 pictures + 7 attachments*

**Abstract**

*Children undergoing treatment for acute lymphocytic leukemia experience several symptoms due to the disease and its treatment. Identification of symptoms and needs allows nursing care to be properly planned. This study aims to analyze nursing assessments in children with acute lymphocytic leukemia in the Aster Room, RSD dr. Soebandi Jember. This research uses a case study design (case study report). Participants were three child clients with acute lymphocytic leukemia in the Aster Room, RSD dr. Soebandi Jember. Subjective data is in the form of interview assessment results, and objective data is in the form of examination results and medical records. Data were analyzed using qualitative descriptive methods. The results showed a nursing history of (1) anemia, (2) weakness, (3) paternal smoker, (4) family with chronic disease. Patterns of health function in the form of changes in (1) cardiovascular (2) nutrition, (3) musculoskeletal function. Laboratory examination results include (1) low hemoglobin, (2) leukopenia, (3) decreased hematocrit, (4) increased lymphocytes, (5) increased SGPT, (6) increased creatinine, (7) hypokalemia. These findings provide the view that professional nurses can guarantee comprehensive care by recognizing the severity of the child's clinical manifestations, carrying out a complete history, requesting laboratory tests so that they can plan care well.*
