ABSTRACT

Currently the institution has the authority in terms of school enrollment , especially in SMPN 3 Situbondo . Then for a decision - should be considered increments corresponding to the determination of prospective students , so it takes a system to classify patterns of selection of candidates for new students dengna consider criteria: danem and charter - plaque using a naïve Bayes . Then, after the pre-determined criteria will classify students diterim and not accepted . With the system of admission of prospective students in SMPN 3 Situbondo can provide precise and accurate solutions . Of the 80 training data there were 31 new classified prospective students are not the same and 49 prospective new students who classified the same . And obtained the percentage of approximately 61.25 % of the same classified .

Key Word : *system, naïve bayes.*
