

ABSTRACT

The economic work ethic always predicts stretching consumers, sellers, and business goods. This is as effort to keep the profit and loss index in the business. This protective process in many entities is often interpreted with the logic of reducing selling prices. Or even the needs of the society.

Statistical Quality Control as a planning and the final of bussiness goods is an economic theory. which can help you find the foresight in the final sale. This process requires a deep theoretical estimate and sensitive economic instincts.

The test was carried out as a competitive medium in controlling the market. Then the mandatory goods, economic access coupled with the fragmentation of heterogeneous consumer demand. For this reason, SQC can be a monument perpetuated in the tradition of working markets on a global scale.
