**ABSTRAK**

Gigitan ular merupakan suatu penyakit akibat kerja yang risiko kejadiannya berkaitan erat dengan pekerjaan petani, nelayan, pemburu, dan pawang ular (Panji, 2016). Pada dasarnya gigitan ular dapat menyebabkan tanda dan gejala seperti: efek lokal (odem dan perdarahan), kematian otot, efek sistem saraf dan bahkan dapat mengakibatkan kebutaan.

Pada kasus ini pasien (Tn. S) datang ke IGD Rumah Sakit Kalisat Jember karena terkena gigitan ular yang mengakibatkan terjadi luka akibat digigit ular, area luka berwarna kehitaman, odem, dan mengeluh nyeri di sekitar luka. Sehingga pasien saat di IGD mendapatkan pertolongan medis yaitu tindakan pemberian Serum Anti Bisa Ular sebanyak 1 vial (5 ml) dalam drip infus PZ 500 cc dengan kecepatan (30 tpm) dan memberikan bantalan di sekitar luka.

Setelah dilakukannya tindakan keperawatan pada Tn. S dengan kasus gigitan ular, pasien dilakukan observasi selama kurang lebih 4 jam saat di IGD dan pasien memerlukan perawatan lanjutan di ruang bedah karena masalah belum sepenuhnya teratasi.
