LATAR BELAKANG

Perkembangan teknologi internet saat ini begitu pesat dalam berbagai bidang tak terkecuali dalam dunia bisnis, hal ini dapat dilihat dengan munculnya berbagai usaha dibidang penjualan berbasis online atau biasa disebut electronic commerce. E-Commerce memberikan manfaat bagi perusahaan sehingga akan menjadi keunggulan kompetitif bagi perusahaan yang mengaplikasikannya. (Rudy, Wahyudiarti, Megaputri, & Wihardini, 2008). Lembaga atau perusahaan yang mengaplikasikan E-Commerce dalam kegiatan pemasaran atau perdagangannya biasa dikenal dengan nama Online shop.

Saat ini Online shop merupakan suatu kebutuhan untuk meningkatkan dan memenangkan suatu persaingan bisnis dan penjualan berbagai macam produk. Kegiatan pemasaran pada sistem ini lebih praktis dan efisien tanpa adanya interaksi langsung antara pelaku usaha dan konsumen dan akan memperhatikan kemudahan bertransaksi dibandingkan proses pemasaran pada toko konvensional.

Semakin besar sebuah Online shop maka semakin banyak transaksi yang dilakukan, serta dapat menarik data yang begitu besar pula. Data tersebut dapat berupa data konsumen, data penjualan dan masih banyak lagi. Tapi terkadang dari besarnya data yang diperoleh, Perusahaan tidak sadar betapa berharganya data tersebut dan hanya dipandang sebagai arsip yang sudah menjadi berkas yang tidak terpakai. Hal tersebut merupakan pandangan yang salah dikarenakan jika mampu mengolahnya dengan tepat, akan dapat memberikan berbagai informasi yang berguna salah satunya yaitu untuk mengetahui minat konsumen pada penjualan produk, yang nantinya informasi tersebut dapat digunakan sebagai penentuan strategi pemasaran. Maka teknik pengolahan data sangat diperlukan untuk menggali informasi dari data tersebut. Dalam hal ini maka digunakanlah teknik data mining.

 <div class="container"> </div>
 <div class="container" align="justify"> <h5> Perkembangan teknologi internet saat ini begitu pesat dalam berbagai bidang tak terkecuali dalam dunia bisnis, hal ini dapat dilihat dengan munculnya berbagai usaha dibidang penjualan berbasis online atau biasa disebut electronic commerce. E-Commerce memberikan manfaat bagi perusahaan sehingga akan menjadi keunggulan kompetitif bagi perusahaan yang mengaplikasikannya. (Rudy, Wahyudiarti, Megaputri, & Wihardini, 2008). Lembaga atau perusahaan yang mengaplikasikan E-Commerce dalam kegiatan pemasaran atau perdagangannya biasa dikenal dengan nama Online shop.
 Saat ini Online shop merupakan suatu kebutuhan untuk meningkatkan dan memenangkan suatu persaingan bisnis dan penjualan berbagai macam produk. Kegiatan pemasaran pada sistem ini lebih praktis dan efisien tanpa adanya interaksi langsung antara pelaku usaha dan konsumen dan akan memperlihatkan kemudahan bertransaksi dibandingkan proses pemasaran pada toko konvensional.
 </h5> </div> <div class="container"> <table> <tr> <td width="70%" align="justify"><h5> Semakin besar sebuah Online shop maka semakin banyak transaksi yang dilakukan, serta dapat menarik data yang begitu besar pula. Data tersebut dapat berupa data konsumen, data penjualan dan masih banyak lagi. Tapi terkadang dari besarnya data yang diperoleh, Perusahaan tidak sadar betapa berharganya data tersebut dan hanya dipandang sebagai arsip yang sudah menjadi berkas yang tidak terpakai. Hal tersebut merupakan pandangan yang salah dikarenakan jika mampu mengolahnya dengan tepat, akan dapat memberikan berbagai informasi yang berguna salah satunya yaitu untuk mengetahui minat konsumen pada penjualan produk, yang nantinya informasi tersebut dapat digunakan sebagai penentuan strategi pemasaran. Maka teknik pengolahan data sangat diperlukan untuk menggali informasi dari data tersebut. Dalam hal ini maka digunakanlah teknik data minig. </h5> </td> <td width="30%" align="right"> </pre>

```

        
    </td>
</tr>
</table>
</div>
<div class="container" align="justify">
    <h5>
        Salah satu metode dalam data mining yaitu clustering atau pengelompokan. Dari beberapa teknik clustering
        yang paling sederhana dan umum dikenal adalah algoritma K-Means. K-Means merupakan salah satu metode data
        clustering non hirarki yang mempartisi data ke dalam cluster sehingga data yang memiliki karakteristik yang sama
        dikelompokkan ke dalam satu cluster yang sama dan data yang mempunyai karakteristik yang berbeda dikelompokkan ke
        dalam kelompok lain (Agusta, 2007)
    </h5>
