Hubungan Kinerja Petugas Kesehatan Dalam Pelaksanaan Program Promosi Kesehatan Dengan Terjadinya Penyakit Degeneratif Di Posbindu Puskesmas Pakusari Jember

Xvi + 65 hal + 1 bagian + 1 gambar + 8 tabel + 13 lampiran

Abstrak

Kinerja (*performance*) adalah gambaran mengenai tingkat pencapaian pelaksanaan suatu kegiatan/kebijakan dalam mewujudkan sasaran, tujuan, misi, dan visi organisasi yang tertuang dalam *strategic planning* suatu organisasi. Penyakit degeneratif secara umum dikatakan bahwa penyakit ini merupakan proses penurunan fungsi organ tubuh yang umumnya terjadi pada usia tua. Tujuan penelitian ini untuk mengetahui hubungan kinerja petugas kesehatan dalam pelaksanaan program promosi kesehatan dengan terjadinya penyakit degeneratif di Posbindu Puskesmas Pakusari Jember. Desain penelitian yang digunakan adalah pendekatan *Cross Sectional*. Populasi dalam penelitian ini adalah masyarakat di Puskesmas Pakusari yang menderita penyakit degeneratif dengan jumlah sampel sebanyak 123 responden dan penelitian ini dimulai pada April – Mei 2019. Teknik pengambilan sampel menggunakan *Quota Sampling*. Teknik pengumpulan data menggunakan kuesioner. Hubungan kinerja petugas kesehatan dalam pelaksanaan program promosi kesehatan dengan terjadinya penyakit degeneratif di Posbindu Puskesmas Pakusari Jember menggunakan uji statistik *Chi-square*. Berdasarkan analisa data dari kinerja petugas kesehatan dalam pelaksanaan program promosi kesehatan dengan terjadinya penyakit degeneratif didapatkan nilai (p value = 0,000) $\alpha = 0,05$ yang berarti ada hubungan kinerja petugas kesehatan dalam pelaksanaan program promosi kesehatan dengan terjadinya penyakit degeneratif di Posbindu Puskesmas Pakusari Jember. Penelitian ini direkomendasikan kepada petugas kesehatan untuk lebih aktif dan inovatif dalam melakukan promosi kesehatan sehingga bisa menjangkau seluruh masyarakat binaan.

The Relationship between Health Officers' Performance in implementation of Health Promotion Programs with Occurrence of Degenerative Diseases in Posbindu Pakusari Jember Health Center

Xvi + 65 pages + 1 chart + 1 picture + 8 tables + 13 attachments

Abstract

Performance is a description of achievement level of an activity / policy in realizing the organization goals, objectives, mission, and vision that contained in the organization strategic planning. Degenerative diseases in general are said that the disease is a process of decreasing the organs function which generally occurs in old age. The purpose of this study was to determine the corelationship between health officers' performance in the implementation of health promotion programs with prevalence of degenerative diseases in Posbindu Pakusari Jember Health Center. The research design used was the Cross Sectional approach. The population in this study were people in Pakusari Health Center who suffered from degenerative diseases with a total sample of 123 respondents and this study began in April - May 2019. The sampling technique uses purposive sampling. Techniques for collecting data using a questionnaire. the relationship between health officers' performance in the implementation of health promotion programs with occurrence of degenerative diseases in Posbindu Pakusari Jember Health Center using Chi-square statistical tests. Based on the analysis of data from the performance of health workers in the implementation of health promotion programs with the prevalence of degenerative diseases values (p value = 0.000) α = 0.05, which means there is a relationship between the health officer's performance in the implementation of health promotion programs with the occurrence of degenerative diseases in Pakusari Jember Health Center. This research is recommended for health officers to be more active and innovative in conducting health promotion so that they can reach all the guided people.

Keywords: Performance, Health Promotion, Degenerative Disease, Elderly, Posbindu.
