The Relationship of Roles of Husbands and Health Workers with Antenatal Care (ANC) Regularity on Pregnant Women in the Third Trimesters in Community Health Center of Arjasa Jember, 2019.

Xiii + 120 pages + 1 figure + 13 tables + 30 appendices

Abstract

Introduction: Husbands take their roles as leaders and protectors of their wives through educating and leading them to the right path. Health workers, on the other hand, are responsible for providing health care to individuals, families, and societies. Antenatal Care (ANC) is pregnancy checking aimed to diagnose the condition of mothers and fetus periodically against any possible deviations found during the pregnancy. Research Method: the study used cross sectional approach aiming to identify relationship of roles of husbands and health workers with regularity of Antenatal Care (ANC) of pregnant women in their third trimester in the Community Health Center of Arjasa Jember. The population of the study is 55 respondents, while the sampling technique used was Cluster Random Sampling. The data were collected with questionnaire and documentation of KIA book (recording mother and child's health). Findings: the analysis of husband's roles resulted the P Value: 0,003 meaning that H_1 is accepted, and that of the health workers yielded the P Value Fisher's Exact Test: 0,002 where H_1 is accepted. There is relationship between the roles of husbands and health workers and the regularity of Antenatal Care (ANC) of pregnant women in their third trimester in the Community Health Center of Arjasa Jember. Conclusion: There is relationship between the roles of husbands and health workers with the regularity of Antenatal Care (ANC) of pregnant women in their third trimester in the Community Health Center of Arjasa Jember. Recommendation: it is suggested that the board of managers of the Community Health Center improve the socialization about the importance of checking pregnancy through printed media like leaflet and so on.
