Relationship Of The Nurse's Convenience (Based On The Comfort Theory Approach Of Katherine Kolcaba) With Patient Satisfaction In UPT Emergency Unit Puskesmas Kasiyan Kabupaten Jember

Ixii + 78 pages + 10 tables + 1 chart + 0 pictures + 11 attachments

Abstract

Providing comfort by health workers is something that is given to patients and their families that will give them satisfaction, because it makes patients and their families feel valued, cared for, and can reduce anxiety. The design of this study was a correlational study using a cross sectional approach with the aim of examining whether there was a relationship between the implementation of the educational needs assessment and patient satisfaction. The population of this research is 65 respondents with a sample of 56 respondents. The sampling technique uses quota sampling. The instrument used was a questionnaire. Resultstatistical test using the Spearman Rho statistical test in a computerized system with a value of $\alpha = 0.05$. Pcomfortable service to providing comfort by nurses as many as 48 respondents (85.7%). Meanwhile, said 8 respondents (14.3%) were less comfortable with providing comfort, then the results of the patient satisfaction analysis said 41 respondents (73.2%) were satisfied, 8 respondents (14.3%) were quite satisfied, and 7 respondents (12.5%) were less satisfied with using the Spearman Rho analysis($\alpha = 0.05$) the result is P Value = 0.00 means there is the relationship of providing comfort by nurses with patient satisfaction . This research is The comfort that is provided is an important aspect to reduce the boredom of patients who are waiting for service and when receiving services in the Emergency Unit, especially patients, must be given maximum comfort and absolutely given for good service quality.

Keywords: Providing Comfort, Patient Satisfaction
