Hubungan Persepsi Dengan Motivasi Ibu Muda Primipara Dalam Melakukan Imunisasi Dasar Lengkap Pada Bayi Di Desa Ambunten Barat Kecamatan Ambunten Kabupaten Sumenep.

xvi + 108 hal + 1 gambar + 9 tabel + 10 lampiran

Abstrak

Imunisasi merupakan suatu program yang dengan sengaja memasukkan antigen dengan pemberian kekebalan tubuh sehingga tubuh resisten terhadap penyakit. Persepsi ibu muda primipara untuk melakukan imunisasi cenderung mudah terpengaruh dengan lingkungan yang ada disekitarnya sehingga mengakibatkan motivasi yang kurang untuk membawa anak imunisasi dasar lengkap. Tujuan penelitian yaitu untuk mengidentifikasi hubungan persepsi dengan motivasi ibu muda primipara dalam melakukan imunisasi dasar lengkap pada bayi di Desa Ambunten Barat Kecamatan Ambunten Kabupaten Sumenep Tahun 2016. Design penelitian ini deskriptif korelasi dengan pendekatan *Cross Sectional* dan pemilihan sampel dilakukan dengan cara total sampling. Didapatkan 34 responden yang memenuhi kriteria sampel yaitu ibu muda primipara ≤ 17 tahun yang memiliki bayi umur ≤ 12 bulan. Penelitian ini dilakukan pada bulan Januari 2016. Hasil penelitian didapatkan sebagian besar ibu muda primipara mempunyai persepsi baik sejumlah 24 orang (70,6%), persepsi kurang baik sejumlah 10 orang (29, 4%). Selanjutnya juga didapatkan mayoritas ibu muda primipara mempunyai motivasi yang baik dalam melakukan imunisasi dasar lengkap yaitu 32 orang (94,1%), motivasi kurang baik sebanyak 2 orang (5,9%). Hasil uji korelasi *spearman Rho* diperoleh $p < 0,000$ ($\alpha \leq 0,05$), berarti H1 diterima yang berarti ada hubungan persepsi dengan motivasi ibu muda primipara dalam melakukan imunisasi dasar lengkap pada bayi di Desa Ambunten Barat Kecamatan Ambunten Kabupaten Sumenep Tahun 2016. Rekomendasi penelitian ini yaitu diperlukan kesadaran ibu muda primipara untuk membawa anaknya imunisasi, di butuhkan faktor pendorong dari tenaga kesehatan untuk meningkatkan promosi kesehatan melalui penyuluhan kepada masyarakat terutama kepada ibu muda primipara.

Kata kunci : Imunisasi, Persepsi, Motivasi.

The Relationship between Primiparous Young Mothers' Perceptions and Motivation in Doing Complete Basic Immunization for Babies in Ambunten Barat Village Ambunten Subdistrict Sumenep District.

xvi + 108 pages + 1 picture + 9 tables + 10 appendices

Abstract

Immunization is a program that deliberately inserts antigen by introducing immune system so the body is resistant to diseases. Primiparous young mothers' perceptions to immunize their children tend to be easily affected by the environment in the surrounding areas which result in low motivation in bringing the children to get the complete basic immunization. The purpose of this study was to identify the relationship between primiparous young mothers' perceptions and motivation in doing the complete basic immunization in Ambunten Barat village Ambunten subdistrict Sumenep district in 2016. The design of this research was descriptive correlation with Cross Sectional approach. The sampling selection was done by total sampling. There were 32 respondents that met the criterion of the sample which was primiparous young mothers who were less than or equal to 17 years of age whose babies were less than or equal to 12 months old. This research was conducted in January 2016. The results of this study showed that there were 24 primiparous young mothers who had good perceptions (70.6%) while the other primiparous young mothers had bad perceptions (29.4%). Moreover, the obtained results revealed that there were 32 primiparous young mothers who had good motivation in doing complete basic immunization (94.1%), while the others had bad motivation (5.9%). The results of spearmen Rho correlation test obtained $p = 0.000$ ($\alpha \leq 0.05$) which means that the H_1 was accepted. This also means that there was a relationship between primiparous young mothers' perceptions and motivation in doing complete basic immunization for babies in Ambunten Barat village Ambunten subdistrict Sumenep district in 2016. The primiparous young mothers need awareness in bringing their children to get immunization, they also need motivational factors from health workers to increase the health promotion through outreach programs for the society, especially primiparous young mothers.

Key words: Immunization, Perceptions, Motivation.
