Hubungan Perubahan Citra Tubuh dengan Motivasi Berobat Pasien Luka Ganggren Diabetes melitus Tipe II di Klinik Rawat Inap Ampel Sehat Wuluhan, 2016

xvi + 107 hal + 1 bagan + 15 tabel + 13 lampiran

#### Abstrak

Citra tubuh merupakan sikap individu terhadap perubahan bentuk, struktur dan fungsi tubuh. Pasien ulkus ganggren mengalami perubahan citra tubuh yang disebabkan oleh luka pada kaki, warna kehitaman, serta timbulnya bau yang berpengaruh pada citra diri. Penelitian ini bertujuan untuk mengetahui Hubungan Perubahan Citra Tubuh Dengan Motivasi Berobat Pasien Luka Ganggren Diabetes melitus Tipe II di Klinik Rawat Inap Ampel Sehat Wuluhan. Penelitian ini menggunakan desain *cross sectional* dengan sampel sebanyak 30 responden. Tehnik pengambilan sampel menggunakan *quota sampling*. Hasil penelitian menunjukkan bahwa 56,7% mengalami citra tubuh negatif dan motivasi berobat tinggi sejumlah 46,7%. Hubungan perubahan citra tubuh dengan motivasi berobat dengan menggunakan *Spearman Rho* diperoleh nilai p value (0,0006), dengan kekuatan hubungan sedang  $r(0,456)$ , maka dapat disimpulkan bahwa ada Hubungan Perubahan Citra Tubuh Dengan Motivasi Berobat Pasien Luka Ganggren Diabetes melitus Tipe II di Klinik Rawat Inap Ampel Sehat Wuluhan. Penelitian ini direkomendasikan kepada perawat agar mampu memberikan motivasi kepada pasien luka ganggren agar menjalani pengobatan rutin untuk mengurangi infeksi serta komplikasi lanjut.

The Correlation between the Change of Body Image and Motivation Treatment of Patients with Gangrene Wound of Type II Diabetes mellitus in Hospitalization Clinic of Ampel Sehat of Wuluhan, 2016.

xvi + 107 pages + 1 charts + 15 tabels + 13 appendices.

Abstract

Body image is individual's attitude towards the changes of shape, structure and function of the body. The sufferers of leg ulcers gangrene must go through some changes of the image of the body caused by wounds on legs, blackening, and malodorous smells which influence their body image. This research aims at knowing the correlation between the change of body image and motivation treatment of patients with gangrene wound of type II diabetes mellitus in Hospitalization Clinic of Ampel Sehat of Wuluhan. This research used cross sectional design with 30 respondents as the sample. The sampling technique used is quota sampling. The research result showed that 56.7% of the respondents experienced negative body image and 46.7% of them were highly motivated to do the treatments. The change of body image with motivation treatment were correlated by using Spearman Rho which acquired p values (0.0006), showing strong correlation while r (0.456). Therefore, it can be concluded that there is a correlation between the change of body image and motivation treatment of patients with gangrene wound of type II diabetes mellitus in Hospitalization Clinic of Ampel Sehat of Wuluhan. From this research, it is recommended for the nurses to be able to encourage the patients with gangrene wound to take continual treatments to decrease the infections and further complications.

Key words: Leg Ulcers Gangrene; Body Image; Motivation Treatment.
