The Effects of Therapeutic Communication towards Motivation Recovery of Patients Suffering from Stroke in Lotus Room of Dr. H. Koesnadi General Hospital of Bondowoso

xvi + 93 pages + 1 picture + 2 charts + 7 tables + 14 appendices.

Abstract

Stroke is one of diseases which could create an anxiety. Anxiety could make someone demotivated to be recovered from his illness. One of non pharmacological therapies to increase their motivation is therapeutic communication. The purpose of this research is to identify the effects of therapeutic communication towards motivation recovery of patients suffering from stroke in lotus room of Dr. H. Koesnadi General Hospital of Bondowoso. The research design used is a postest with control group design. The total of population in this research is 36 clients and the samples were taken from the respondents during a certain circumstances of time covering 36 respondents by using quota sampling technique. The result of statistical examination using Mann Whitney with $\alpha=0.05$ acquired p value 0.001 so that it can be concluded that there is an effect between therapeutic communication towards motivation recovery of patients suffering from stroke in lotus room of Dr. H. Koesnadi General Hospital of Bondowoso. From this research, it is recommended for the nurses to be able to have a good communication with patients suffering from stroke so that they become more motivated to recover.
