Hubungan Perilaku Orang Tua dalam Perawatan Gigi dengan Kejadian Karies Gigi Anak Usia Prasekolah di Taman Kanak-Kanak Al Ishlah Jember

### Abstrak

Pendahuluan: Perilaku orang tua dalam pemeliharaan kesehatan gigi dan mulut, sangat berpengaruh dalam pemberian dukungan di dalam membimbing, memberikan pengertian, mengingatkan, dan menyediakan fasilitas kepada anak agar dapat memelihara kebersihan gigi dan mulutnya. Desain penelitian yang digunakan dalam penelitian ini korelasional dengan menggunakan metode pendekatan *cross sectional*. Populasi dalam penelitian ini adalah semua anak yang tercatat sebagai peserta didik di taman kanak-kanak Al ishlah jember sebanyak 63 anak. Teknik sampling yang digunakan dalam penelitian ini adalah dengan metode *simple random sampling* dan didapatkan jumlah sampel sebanyak 54 anak. Teknik pengumpulan data menggunakan kuesioner. Hasil: Menunjukkan bahwa orang tua yang perilaku cukup baik kepada anak di TK Al Ishkah Jember sebanyak 34 orang dengan persentase 67%, dan anak terjadi karies gigi sebanyak 35 orang (65%). Hasil uji menggunakan *chi-square* menghasilkan nilai signifikan sebesar 0,000. Nilai uji signifikan 0,000 yang lebih kecil dari 0,05 menunjukkan bahwa ada hubungan antara perilaku orang tua dengan kejadian karies gigi anak usia prasekolah di TK Al Ishlah Jember. Petugas kesehatan Puskesmas sebaiknya membina dalam bidang kesehatan gigi di TK Al Ishlah Jember yang merupakan salah satu sekolah di wilayah kerja Puskesmas.

*The Relationship between Parents' Behavior in Dental Care and the Incidence of Dental Caries in Preschool Children in Al Ishlah Kindergarten, Jember*

***Abstract***

*Introduction: Parents' behavior in maintaining oral and dental health is very influential in providing support in guiding, providing understanding, reminding, and providing facilities for children to maintain the cleanliness of their teeth and mouth. The research design used in this study was correlational using a cross sectional approach. The population in this study were all children who were registered as students in Al Ishlah Kindergarten Jember as many as 63 children. The sampling technique used in this study was the simple random sampling method and the sample size was 54 children. The data collection technique used a questionnaire. Results: It shows that there are 34 parents who have good behavior towards the children in TK Al Ishkah Jember with a percentage of 67%, and the children who have dental caries are 35 people (65%). The test results using the chi-square yield a significant value of 0.000. The significant test value of 0.000, which is smaller than 0.05, shows that there is a relationship between parental behavior and the incidence of dental caries in preschool children at Al Ishlah Kindergarten, Jember. Public health centre should provide guidance in the field of dental health at TK Al Ishlah Jember, which is one of the schools in the Public health centre.*
