

ABSTRAK

Permasalahan sampah menjadi salah satu isu lingkungan yang semakin kompleks seiring dengan meningkatnya jumlah penduduk dan aktivitas masyarakat. Pengelolaan sampah yang kurang optimal dapat menimbulkan berbagai dampak negatif terhadap lingkungan dan kesehatan masyarakat. Salah satu upaya yang dikembangkan untuk mengatasi permasalahan tersebut adalah melalui program bank sampah yang melibatkan partisipasi masyarakat dalam pengelolaan sampah berbasis konsep 3R (Reduce, Reuse, Recycle). Penelitian ini bertujuan untuk menganalisis sistem pengelolaan Bank Sampah Binor Lestari di Desa Binor serta mengkaji peran serta masyarakat dalam mendukung pengelolaan sampah berbasis komunitas.

Penelitian ini menggunakan pendekatan kualitatif dengan metode deskriptif. Pengumpulan data dilakukan melalui observasi lapangan, wawancara dengan pengelola bank sampah dan masyarakat, serta dokumentasi. Data yang diperoleh kemudian dianalisis secara deskriptif untuk menggambarkan kondisi pengelolaan sampah, tingkat partisipasi masyarakat, serta dampak program bank sampah terhadap lingkungan dan masyarakat di Desa Binor.

Hasil penelitian menunjukkan bahwa Bank Sampah Binor Lestari memiliki peran penting dalam mendukung pengelolaan sampah berbasis masyarakat. Melalui kegiatan pemilahan, penimbangan, dan pencatatan sampah, masyarakat mulai terbiasa mengelola sampah rumah tangga secara lebih teratur. Keberadaan bank sampah juga memberikan dampak positif terhadap peningkatan kesadaran masyarakat dalam menjaga kebersihan lingkungan serta memberikan manfaat ekonomi melalui pemanfaatan sampah yang memiliki nilai jual. Meskipun demikian, program bank sampah masih menghadapi beberapa kendala seperti belum meratanya partisipasi masyarakat dan keterbatasan fasilitas pendukung.

Secara umum, program Bank Sampah Binor Lestari dapat menjadi salah satu alternatif solusi dalam pengelolaan sampah berbasis komunitas di tingkat desa. Penguatan sistem pengelolaan, peningkatan partisipasi masyarakat, serta pengembangan inovasi dalam pengelolaan sampah diharapkan dapat meningkatkan efektivitas program bank sampah dalam mendukung pengelolaan lingkungan yang berkelanjutan..

ABSTRACT

Waste management has become an increasingly complex environmental issue along with population growth and the increasing intensity of community activities. Inadequate waste management can lead to various negative impacts on the environment and public health. One of the approaches developed to address this issue is the waste bank program, which involves community participation in waste management based on the 3R concept (Reduce, Reuse, Recycle). This study aims to analyze the management system of the Binor Lestari Waste Bank in Binor Village and to examine community participation in supporting community-based waste management.

This study employed a qualitative approach using a descriptive method. Data were collected through field observations, interviews with waste bank managers and community members, and documentation. The collected data were then analyzed descriptively to describe the waste management system, the level of community participation, and the impact of the waste bank program on the environment and the community in Binor Village.

The results show that the Binor Lestari Waste Bank plays an important role in supporting community-based waste management. Through activities such as waste sorting, weighing, and recording, the community has gradually become accustomed to managing household waste more systematically. The existence of the waste bank also contributes to increasing public awareness of environmental cleanliness and provides economic benefits through the utilization of recyclable waste with economic value. However, the program still faces several challenges, including uneven community participation and limited supporting facilities.

Overall, the Binor Lestari Waste Bank program can serve as an alternative solution for community-based waste management at the village level. Strengthening the management system, increasing community participation, and developing innovations in waste management are expected to enhance the effectiveness of the waste bank program in supporting sustainable environmental management.
